

Engagement Opportunities

Our mission to link our communities of healthcare providers to resources is a path that supports the improving of Pharmaceutical Outcomes. Training the health workforce truly helps in improving our economic outlook.

As government seeks to strengthen the health care program of the country, a well-meaning private -public partnership provides a firm foundation for sustained upward thrust.

A trained workforce means improved production, reduction in mistakes and waste, confidence and better working environment. The reduction in weak links in the health sector can best be sustained by a trained workforce.

One health official said, “our supply chain problem is space and training”, I got you Sir. Quite understandable. As we search for resources, we thought to share these opportunities below.

Study Opportunities from the NIH
